

FP-75

Field Channel Programmer

- **Perfect For Quick Repeat Programming**
- **Flash Memory Technology**
- **Battery Operated**
- **Easy to Use**

The FP-75 Field Channel Programmer provides a quick and convenient way to change the channel of large numbers of PR-75 receivers to accommodate different venues requiring a different set of channels. The programmer will allow the receiver to receive one or more designated channels or any specific group channels that can then be manually accessed in sequence for “roundabout” type of channel selection with the AutoSmart-Tuning™ button (AST). In this mode of operation the AutoSmart-Tuning™ function is inhibited and only the channel or channels programmed will be received.

COMTEK®

FP-75 Setup and Operation

1. Open the battery door on programmer box and insert new 9 volt alkaline battery (*Eveready 522 or equivalent*).
2. Connect the programming cord to the programmer.
3. Plug the micro-mini plug of the programming cord into the Data I/O port of the PR-75 receiver and then switch "on" the programmer. (*Ensure that the plug is in all the way.*)

Note: When the programmer is turned off, it retains the last program used.

To read the current channel program in the PR-75 receiver you must push the *read* button.

4. To choose or remove a desired channel or channels, push the channel button *on* or *off*. The illuminated LEDs above the channel switches indicate the channels that will be programmed when the *write* button is pushed. When the *write* process is complete, the programmed channels' LEDs will re-illuminate.
5. Since the programmer retains the last program used, it is convenient to program multiple PR-75 receivers to the same program very quickly. Program the first PR-75 receiver to the desired channel or channels. Then turn off the power switch and remove the micro-mini plug from the receiver. Plug the micro-mini plug into the next receiver to be programmed. Turn on the power switch and wait for the LEDs to illuminate on the programmer, and then press the *write* button. Wait for the LEDs to re-illuminate to verify programming. Turn off the power switch and continue this process for the remaining PR-75 receivers.
6. To resume operation in the AutoSmart-Tuning™ program mode, all ten channels A-J must be programmed.
